c

```
// kernel.c - Writing directly to VGA text buffer
void kernel_main(void) {
    // VGA text mode buffer starts at physical address 0xB8000
    char *video_memory = (char *)0xB8000;
    const char *str = "Kernel Loaded!";

    int i = 0;
    int j = 0;

    while (str[j] != '\0') {
        video_memory[i] = str[j];      // ASCII character
        video_memory[i + 1] = 0x07;    // Attribute byte: Light grey on black
        j++;
        i += 2;                        // Each screen character takes 2 bytes
    }

    while (1) {
        // Keep the kernel running
    }
}
```
